

Help - Opening an Adobe PDF File

If you have problems opening one of these PDF files, it may be because the file is too large or your connection is too slow. This is a common problem and has a very simple solution. Download the document directly to your computer, thus bypassing the in-window function that often causes the faults relating to slow connection/busy servers/large documents.

Downloading PDF files

If you click the link to the PDF file and it does not open automatically, follow these steps:

1. Right-click the link to the PDF file. A menu appears.

Internet Explorer menu

Netscape Navigator menu

2. Click **Save target as**. A dialog box appears that allows you to select the location on your computer where you would like to save the PDF file. On some browsers, the text of the menu selection may be **Save link as** instead of "Save target as".
NOTE: Be sure to remember the location where you saved your file so you can find it later!
3. Save the PDF file to your computer.
4. Navigate to the directory where you saved the PDF file and double-click the file. Acrobat Reader will open and display the contents of the PDF file.
